No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                             A Geneseq 19Jun03:*

The present sequence represents human platelet-derived growth factor C (PDGF-C) (formally designated VBGF-F). PDGF-C polypeptides have the ability to stimulate and enhance proliferation or differentiation, and/or growth or motility of cells expressing a PDGF-C receptor.

C and/or growth or motility of cells expressing a PDGF-C receptor.

CC PDGF-C polypeptides can be used in pharmaceuticals for promoting cell proliferation, preferably in combination with one other growth factor and heparin. Pharmaceuticals comprising PDGF-C polypeptides can also be used for stimulating connective tissue or wound healing. The PDGF-C polypeptide can be enzymatically processed to generate the active truncated form of PDGF-C and used to regulate the receptor-binding mitogenesis in a mammal and to induce PDGF and used to promote fibroblast mitogenesis in a mammal and to induce PDGF and processing PDGF-C and used to inhibit tumour growth of a tumour CDGF-C antagonists can be used to inhibit tumour growth of a tumour corricoarcinoma, Wilms tumour, megakaryoblastic leukaemia, lung carcinoma and erythroleukemia, can be identified by testing for expression of confocalling during invasion of tumour cells into a normal population of cells. Antagonists can also be used to treat fibrotic conditions,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô

The patent discloses a method for producing a transgenic, non-human animal over-expressing a platelet derived growth factor C (PDGF-C), or its functional fragment or analogue. The method involves introducing a transgenic PDGF-C DM into a cell of a non-human animal, introducing the cell into a non-human animal and allowing the cell to develop into a non-human animal. The transgenic animal is useful as a model to study disease tattes characterised by over-expression of PDGF-C and to find therapy for those diseases, particularly hypertrophy and interest in various organis including the heart. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     LPLDLIANNAITARSTLEDLIRYLEPERWQLDLEDLYRPTWQLLGKAFVFGRKSRVVDLNL 240

This invention describes the isolation of a novel human vascular endothelial cell growth factor-E (VEGF-E) polypeptide which has tranquillizer, vulnery and cardiant activity. VEGF-E can be administered therapeutically, especially by expressing encoding polynucleotides, to treat cardiovascular or endothelial disorders in mammals, especially by mammals and tissue generation and may especially by expressing encoding polynucleotides, to treat cardiovascular or endothelial disorders in mammals, especially can be used to treat cardiac hypertrophy in can be combined with a carrier in pharmaceutical compositions, which regeneration, and may especially be used to treat dardinistered to can be administered to treat angiogenic disorders in mammals (especially humans) e.g. cancer or sereen for antagonists and agonists, and the antagonists administered to treat angiogenic disorders in mammals (especially them and the detect VEGF-E polypeptide, especially to disgnose cardiovascular, endothelial or angiogenic disorders in mammals (e.g. vascular disease, or neovascularization associated with tumor formation), by contacting the antibody with a tissue sample and detecting formation cardiovascular, polypeptide complex. Polymucleotides encoding VEGF-E can be used to disgnose cardiovascular and endothelial disorders in mammals, by detecting abnormally high or low VEGF-E gene expression in tissue samples. They can also be used to disgnose a disease or susceptibility to a disease related to a mutated form of VEGF-E can be used to produce probes useful to detect related semples. They may also be used to produce probes useful to detect related semples. They may also be used to produce probes useful to detect related semples. They may also be used to produce probes useful to detect related sequences or for gene mapping. This invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ô

The present invention describes secreted and transmembrane polypeptides and their polynucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AA233891 to AA234338, and AAV1685 to AAV1774 represent polymucleotide and polypeptide sequence given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GRWCGSGTVPGKQISKGNQIRIRFVSDEYFPSEPGFCIHYNIVMPQFTEAVSPSVLPPSA

                                                                                                                                                 related (VEGF-R) protein. VEGF-R can be used in assays to identify compounds that bind to it or that antegonize its activity. VEGF-R antagonizes (e.g. anti-VEGF-R antibodies) are useful for inhibiting tissue growth. This is useful for inhibiting tumour growth and for treating cancer. VEGF-R itself can be used to stimulate tissue growth, anglogenesis and to treat coronary artery blockage. The VEGF-R coding sequence can be used for the recombinant production of the VEGF-R protein.

The invention relates to the human growth factor homologue zvegf4

(AAB48653), and nucleic acids encoding it (AAC81555). Zvegf4 is a member

of the PoDGF (platelet-derived growth factor)/VEGF (vascular endothelial

growth factor) family. Zvegf4 has a growth factor domain (AAB48654)

characterised by a PDGF cystine knot structure, and a CUB domain

characterised by a PDGF cystine knot structure, and a CUB domain

characterised by a PDGF cystine knot structure. Zvegf4 has PDGF-like

activity, having mitogenic activity on fibroblasts, vascular smooth

comparisons a beta barrel structure. Zvegf4 has PDGF-like

activity, having mitogenic activity on fibroblasts, vascular smooth

comparisons expression constructs and host cells comprising human zvegf4

comparisons; expression constructs and host cells comprising human zvegf4 or fragments thereof, particularly human zvegf4 human zvegf4 and and post cells comprising human zvegf4 and and post cells comprising human zvegf4 or a fragment thereof; a method of activating

complete acids; the recombinant expression of human zvegf4; an antibody

complete complete pDGF receptor using a zvegf4-derived polypeptide; a

coll-surface PDGF receptor using a zvegf4-derived polypeptide; a

coll-surface PDGF receptor using a zvegf4-derived polypeptide; a

comprising exposing bone cells, comprising exposing bone cells to

compression of modulating the proliferation, differentiation, migration or

collular differentiation or proliferation. They are particularly used for cellular differentiation or proliferation. They are particularly used for multiple sclerosis). Due to their osteogenic activity, they may be used to

complete neurity growth (e.g., in the treatment of periodontal disease and fractures. They may be used to

complete sclerosis). Due to their osteogenic activity, they may be used to

complete colerosis or expected the colline colline colline colline sclerosis). The present cells, which may be used to used to enhance expansion and mobilisation of hamacopositic stem cells

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a method for enhancing tissue growth, promoting wound healing or stimulating smooth muscle growth by administering a platelet-derived growth factor (PDGF) related protein, designated LPB or its analogue. Also described is a method of slowing the progress of atherosclerosis or treating atherosclerosis comprising the administration of an LPB antagonist. The method is useful for enhancing tissue growth, promoting wound healing and stimulating smooth muscle growth. Antagonists of LPB are useful for treating atherosclerosis. The present sequence represents human LPB, which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 MSLFGLLLVTSALAGQRRGTQAESNLSSKFQFSSNKEQNGVQDPQHERIITVSTNGSIHS

activity. The polymucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bioactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78600 to AAC78987 represent PCR primers and probes used in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 300
                                                                                                                                                                            This invention describes a novel vascular endothelial growth factor-X (VEGF-X) protein (Ia) and its encoding polynucleotide (IIa) which has vulnerary, cytostatic, antiheumatic, antiarthritic, antipsoriatic and antidabetic activity and acts as an angiogenesis and vascularization regulator. An antisense molecule of the invention is useful for treating or preventing cancer, rheumatoid arthritis, psoriasis and diabetic retinopathy by inhibiting angiogenic activity or inappropriate vascularization including formation and proliferation of new blood and tissue repair in a subject. The products of the invention and organ and tissue repair in a subject. The products of the invention are useful for preparing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote skin graft growth, tissue repair, proliferation of new blood vessels, tissue repairs and account of the invention are useful pressure access.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

This invention describes a novel vascular endothelial growth factor-X (VEGF-X) protein (1a) and its encoding polynucleotide (11a) which has vulnerary, cytostatic, antirheumatic, antiarthritic, antipsoriatic and antidabetic activity and acts as an angiogenesis and vascularization regulator. An antisense molecule of the invention is useful for treating or preventing cancer, rheumatoid arthritis, psoriasis and diabetic retinopathy by inhibiting angiogenic activity or inappropriate vascularization including formation and proliferation of new blood and tissue repair in a subject. The products of the invention and organ and tissue repairing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes a novel vascular endothelial growth factor-X (VEGF-X) protein (Ia) and its encoding polynucleotide (IIa) which has vulnerary, cytostatic, antirheumatic, antiarthritic, antipsoriatic and antidiabetic activity and acts as an angiogenesis and vascularization regulator. An antisense molecule of the invention is useful for treating or preventing cancer, rheumatoid arthritis, psoriasis and diabetic retinopathy by inhibiting angiogenic activity or inappropriate vascularization including formation and proliferation of new blood vessels, growth and development of tissues, tissue regeneration and organ and tissue repair in a subject. The products of the invention are useful

for preparing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote skin graft growth, tissue repair, proliferation of new blood vessels, tissue regeneration and organ repair by promoting angiogenic activity ovascularization. This sequence represents the human 990126vegx protein used to illustrate the method of the invention.

This invention describes a novel vascular endothelial growth factor-X (VEGF-X) protein (Ia) and its encoding polynucleotide (IIa) which has vulnerary, cytostatic, antirheumatic, antiarthritic, antisporiatic and antidiabetic activity and acts as an anglogenesis and vascularization regulator. An antisense molecule of the invention is useful for treating or preventing cancer, rheumatoid arthritis, psoriasis and diabetic retinopathy by inhibiting anglogenic activity or inappropriate vascularization including formation and proliferation of new blood vessels, growth and development of tissues, tissue regeneration and organ at the state growth, as ubject. The products of the invention are useful for preparing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote skin graff growth, tissue repair, proliferation of new blood vessels, tissue regeneration and organ repair, proliferation of new blood vessels, tissue regeneration and organ repair by promoting angiogenic activity or vascularization. This sequence represents the human VEGF-X protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

cells Novel PRO polypeptides useful for preventing or rescuing retinal cel from injury caused by ocular diseases such as retinitis pigmentosa, retinopathy, retinal degenerative diseases, degenerative myopia, uveitis

Claim 2; Fig 2; 140pp; English.

The present sequence is that of human PRO200 or vascular and other control factor E (VEGF-E), as predicted from a cDNA clone (see AAA88515) that was isolated from a glioma cell line G61 ilrary using probes (see AAA88521-26) based on an expressed sequence 1 ibrary using probes (see AAA88521-26) based on an expressed sequence comparison of 39,029 and a pi of about 6.06. A method for producing PRO polypeptides, including PRO200, using a host cell transformed with a vector comprising a PRO nucleic acid is claimed. The invanion relates to the use of PRO polypeptides to delay, prevent or rescue retinal cells such as retinal neurons selected from photoreceptors, retinal ganglion cells, displaced retinal again on cells, displaced amacrine cells, displaced including Mueller cells and photoreceptors and supportive cells (including Mueller cells and cells are preferably photoreceptors and depradation. The retinal cells from injury and degradation. The retinal cells from injury and degradation, retinal cells from injury and degradation, including age-related, retinal detachment, retinal degeneration, including age-related, retinal detachment, retinal cells and moular disease selected from retinal desenses, macular holes, degenerative myopia, acute relatal necrosis syndrome, traumatic chorioretinopathies or contusion such as Purtscher's retinal vision collagen vascular alseases, thrombocyclopenic purpura, celusion, collagen vascular as central or branch retinal vision uveits, retinal vasculitis and occlusion associated with Eales

The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO antibodise, agonists and antagonists are useful for treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, spondybarthropathies, systemic ederosis, idiopathic inflammatory myopathies, sjographies, systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune hrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demoyelinating diseases of the central and peripheral nervous systems, hepatobiliary diseases of the central and peripheral nervous systems, hepatobiliary diseases of the central count of immune-mediated skin diseases, allergic diseases, immunological disease, the lung, and transplantation associated diseases including graft rejection and graft-versus-host-disease.

AAC5837 to AAC58578 represent PCR primers and hybridisation probes used in the isolation of human PRO spolynucleotide and protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sixty four PRO polypeptides, useful in the diagnosis and treatment of immune related disorders, e.g. systemic lupus erythematosis, rheumatoid arthritis, osteoarthritis, thyroiditis and diabetes mellitus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Henzel W;

                           Sequence 2, Application US/09823033
Patent No. US20020004225A1
GENERAL INFORMATION:
APPLICANT: Hart, Charles E.
APPLICANT: Gilbertson, Debra G.
TITLE OF INVENTION: METHODS FOR PROMOTING GROWTH OF BONE,
TITLE OF INVENTION: LIGAMENT AND CARTILAGE
FILE REFERENCE: 00-12
CURRENT APPLICATION NUMBER: US/09/823,033
CURRENT APPLICATION NUMBER: US/09/823,033
CURRENT FILING DATE: 2001-03-29
NUMBER OF SEQ ID NOS: 5
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 2
ILENGTH: 345
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     VIKKYHEVLQLRPKTGVRGLHKSLTDVALEHHERCDCVCRGSTGG 345

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Description: catalyzes hydrolysis of the carboxyl-terminal propeptide of collagen ty C; Superfamily: procollagen C-endopeptidase; astacin homology; Cir/Cis repeat homology; C; Superfamily: procollagen C-endopeptidase; astacin homology; Cir/Cis repeat homology; C; Sylvayacds: alternative splicing; beta-hydroxyasparagine; bone; calcium; duplication; F; 12-22/Domain: signal sequence #status predicted <SiG.>
F; 23-986/Product: procollagen C-endopeptidase tolloid-like splice form #status prediction; F; 32-431/Domain: Cir/Cis repeat homology <CiR1>
F; 532-431/Domain: Cir/Cis repeat homology <CiR2>
F; 551-587/Domain: Cir/Cis repeat homology <CiR3>
F; 551-700/Domain: Cir/Cis repeat homology <CiR3>
F; 707-742/Domain: Cir/Cis repeat homology <CiR4>
F; 747-856/Domain: Cir/Cis repeat homology <
